Part III DETAILED ACTION

- 1. This action is responsive to communications: amendment filed on August 3, 2003, 2003 to the application, filed on 3/7/97, which is a continuation of 08/330,573, filed on 10/28/94.
- 2. Claims 104-121 are pending in this case. Claims 104, 109, 113 and 118 are independent claims.
- 3. It is acknowledged that Applicant clarified the status of claims 84-103 that they have been cancelled.

Priority

4. Receipt is acknowledged of papers submitted under 35 U.S.C. § 119, which papers have been placed of record in the file.

Drawings

5. This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

Specification

Art Unit: 2178

6. Examiner requests that Applicant review the application carefully for informalities including typographical errors and awkward languages that may resulted from translation.

Claim Rejections - 35 USC § 112

7. Claims 84-103 remain rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As per independent claims 84-103, the claimed term "without a further special key depression" is indefinite, since it is unclear exactly what constitutes "a special key". In other words, it is not clear which keys are considered to be the "special" keys and which keys are not considered to be special.

Claim Rejections - 35 USC § 102

- 8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:
 - A person shall be entitled to a patent unless --
 - (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 9. Claims 104-108 and 113-117 remain rejected under 35 U.S.C. 102(b) as being anticipated by O'Dell, U.S. Pat. No. 5,109,352, 4/92.

Art Unit: 2178

As per Claims 104-108, 113-117, O'Dell discloses the claimed invention of:
entering and storing a plurality of lines of text and original words in a dictionary and
replacing the entered lines of text with the unique line of text or the original word without
using a special function key; identifying a plurality of lines of text with the same stem, and
determining the word; random access storing the plural lines of text and the unique line of text.
Referring to O'Dell, O'Dell teaches a word processor to enter a plurality of lines of text
(FIG.10). O'Dell stores the plurality of characters in a Chinese or Japanese (or European)
character dictionary, and allows the user to enter the stokes (item 50 in FIG.10). FIG.5 shows
the plurality of lines of words with the same initial stems, giving the user the visual feedback
of the strokes entered for the character input.

Claim Rejections - 35 USC § 103

- 10. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103[©] and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2178

Claims 109-112 and 118-121 remain rejected under 35 U.S.C. 103(a) as being unpatentable over O'Dell in view of Shimizu et al., U.S. Pat. No. 5,870,492, 2/99 (filed 6/92).

Claims 90-92, 100-103 and 109-112, 118-121 recite substantially similar limitations as claims 63-68, 72, 73-78, 82 and are similarly rejected. However, O'Dell does not explicitly teach the use of handwritten input. O'Dell uses the keyboard to represent the strokes for the characters (FIG.1E). Nevertheless, the use of hand writing input (e.g., using a stylus, tablet, pen) was extremely well known in the computer art at the time of the invention. With respect to the missing limitation, Shimizu teaches the following pertinent features. Like O'Dell, Shimizu teaches inputting the Chinese or Japanese characters for text processing. Shimizu explicitly points out that in inputting the Japanese characters, it is difficult to input by hand and write the characters that are similar in shapes (col.1, lines 20-30). Shimizu then teaches the solution where the candidate characters are displayed as the user inputs the strokes by hand writing (col.2, lines 1-15). Furthermore, Shimizu allows the user to select the desired character without having to use the "special character (col.2, lines 15-25). Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to have envisage using O'Dell's system to take handwritten inputs of Shimizu, in order to accommodate the widely used pen-based computing systems to effectively enter the foreign language characters with similar shapes.

Application/Control Number: 08/813,247

Art Unit: 2178

Response to Arguments

Page 6

12. Applicant's arguments filed August 3, 2003 have been fully considered but they are not persuasive.

On page 2 of the argument, Applicant states "O'Dell claims do not correspond to any claim of the present invention. Fig. 5 of O'dell shows the discovery, as stated in the O'Dell specification, in col. 10, lines 20-." It is not clear what is being argued by asserting "the discovery." Nevertheless, the argument that O'Dell's claims have to correspond to the Applicant's claims is in error. Any part of O'Dell's reference, in addition to the claims, can be used to show an evidence of the prior art. Furthermore, Appliant argues that O'Dell's "Figure 5, for example, the string 12313131 is adequate in identifying the character and the remaining four code numbers 3233 are really not necessary for identifying character. For this reason, an operator need not enter the entire string but can simply stop after entering 12313131 since uniqueness has already been established at that point." Examiner agrees with the Applicant's analysis of this O'Dell's feature. However, Examiner does not agree that the feature of O'Dell precludes any claimed limitation. For example, Claim 104 claims restoring a unique lines of text or original words. This is still true in O'Dell. O'Dell's entry of the sequential characters, "1231313" is to locate the word in the unique location. That is the "1231313" entry is simply an identification of which word is to be location. Once the word is identified, the system then retrieves the word using a "unique" physical location in memory. Clearly "1231313" is not an identification of the location, but mere entry by the user to identify the word trying to retrieve.

Art Unit: 2178

On page 3 of the argument, with respect to the rejection under 35 USC 103(a) as being unpatentable over O'Dell in view of Shimizu et al., Applicant argues that "Shimizu relates to the hand-written character recognition, and O'Dell does nothing for the recognition." The Applicant's arguments are not persuasive. O'Dell teaches inputting Chinese characters to a computer system using a keyboard based input. And, the reference of Shimizu was applied to show that it was well known to use a "hand-written" method to input the Chinese characters in addition to using a keyboard. Thus, the incorporation of Shimizu was to show that it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to have input O'Dell's Chinese characters using the well known hand-written input method. Thus, the Applicant's arguments are not persuasive.

Conclusion

13. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

14. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steve Hong whose telephone number is (703) 308-5465. The examiner can normally be reached on Monday-Friday from 8:00 AM-5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Heather Herndon, can be reached on (703) 308-5186.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 305-3900.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks Washington, D.C. 20231

or faxed to:

(703) 308-9051, (for formal communications intended for entry)

Or:

(703) 305-9724 (for informal or draft communications, please label "PROPOSED" or "DRAFT")

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington. VA., Sixth Floor (Receptionist).
